Bowl solution process

Bowl process is delivering a product that meets the customer's requirements that is bug-free, delivered on time and within budget.

Customer requirements can include some expectations of usability, reliability, maintainability, portability, extendibility, security, etc. A key part of the Bowl process challenge is to actually identify these requirements, and make sure there are incorporate them in the final product we deliver.

| Technology Competencies |
|---|
| Databases + Microsoft SQL Server, Oracle, Sybase ASE, dBase, My SQL |
| Development Capabilities + Microsoft .Net technologies, HTML, PHP, Java, AJAX (Extensive Web Application development Experience) |
| Application/Web Servers + Tomcat, IIS, Netscape Enterprise Server, Apache |
| Operating Systems + Windows - Win 9x, NT, 2K, XP Professional and Server + Unix - Solaris, Linux Red Hat, IBM AIX, HPUX (Application Testing for UNIX OS) |
| Bug/Defect Tracking Tools + Test Director + Borland Star Team + Serena PVCS Tracker (formerly Merant) + Rational Clear Quest |
